

*SELF-EXTRACTION PANEL HINGE*

ABSTRACT

The present invention is directed to a system for providing a removable access panel for utilization with electronic devices. The panel of the present invention is connected to the frame of an electronic device through the use of a pocket hinge which allows a curved extension on the cover to engage a corresponding curved surface included in the pocket. Utilization of the present invention allows for the electronic device to maintain its overall provide while providing a hinge system allowing for ease of access and removable functionality.
